beyond lowest order in perturbation theory an understanding of the data requires a more sophisticated knowledge of quantum field theory including ideas of renormalization the treatment of quantum field theory has therefore been considerably extended to provide a uniquely accessible and self contained introduction to quantum field dynamics as described by feynman graphs the level is suitable for advanced fourth year undergraduates and first year graduates these developments are all contained in the first volume which ends with a discussion of higher order corrections in qed the second volume is devoted to the non abelian gauge theories of qcd and the electroweak theory as in the first two editions emphasis is placed throughout on developing realistic calculations from a secure physical and conceptual basis
